HTTP Status Codes Cheat Sheet

Successful Requests

200 OK	Request was successful.
201 Created	Request was successful and something new was created based on that request.
202 Accepted	Request was received successfully, but may not be acted on immediately.
203 Non-authoritative Information	Request was successful, but information sent to the client about the response comes from a 3rd party server.
204 No Content	Request was successful, but no data is sent back.
205 Reset Content	Request from the server to reset the information sent, such as form data.
206 Partial Content	Response to a successful request for only part of a document.

Client Errors

400 Bad Request	The server did not understand the request.
401 Unauthorized	Client must be authorized before access, typically through some kind of login.
403 Forbidden	Client does not have permission to access the requested document. If this shows up on a document that should be available, it is likely a permissions issue.
404 Not Found	Requested document was not found at the URL give and there is no new location specified for the document. Does not mean that the document is permanently missing from the given URL.
405 Method Not Allowed	Request method was not allowed for the specified document.
406 Not Acceptable	Requested document cannot be sent in a way that the client can understand.
407 Proxy Authenti-cation Required	Client must be authorized by the proxy before the requested document can be sent.
408 Request Timeout	Amount of time for the request exceeded the amount of time that the server is set to wait for a request.
409 Conflict	Requested document could not be sent because of a conflict in the request.
410 Gone	Similar to a 404, except that it means the document is permanently gone from the URL and there is no new location specified.
411 Length Required	Request refused because content length must be specified by client.
412 Precondition Failed	At least one condition of the request has failed.
413 Request Entity Too Large	Request was larger than the server was able to handle. A common example of this would be if a Lile is sent through a posted form and it is larger than the server settings allow for a post.
414 Request URI Too Long	The URL was longer than what the server could handle. A URL resulting in this error is normally thousands of characters long, thus it is rarely an issue.
415 Unsupported Media Type	Indicates that the format of at least part of the request is unsupported.
416 Requested Range Not Satisfiable	Request could not be fulfilled. Can occur if client requests a part of a document that doesn't exist.
417 Expectation Failed	The server could not fulfill the requirements sent in the "Expect" header field.

Redirects

300 Multiple Choices	Response indicating that what was requested has moved or that there are multiple options that match the request.
301 Moved Permanently	Requested document was moved permanently and response contains the URI for that new location. Important to use when changing domains names or URLs of existing documents.
302 Found	Requested document was temporarily moved to a different location. The URI of the new location is sent back with the response. 303 and 307 are more specific versions of this type and were implemented as of HTTP/1.1.
303 See Other (HTTP/1.1)	Requested document found and responds with the URI where the document can be currently be found.
304 Not Modified	Requested document has not changed since the last time it was requested. Client loads the document from the cache.
305 Use Proxy	Requested document can only be accessed through a specified proxy.
307 Temporary Redirect (HTTP/1.1)	Requested document can temporarily found at a different URI, which is given in the response. This is a more pure version of what a 302 is normally meant to be.

Server Errors

500 Internal Server Error	Generic error message meaning that something broke but nothing more specific can be sent.
501 Not Implemented	Server does not support what is required to fulfill the request.
502 Bad Gateway	Server acting as a gateway or proxy received response from an upstream server that was deemed invalid.
503 Service Unavailable	Server is currently unavailable due to high load, maintenance, or other temporary situation.
504 Gateway Timeout	Server acting as a gateway or proxy did not receive response within the amount of time that the server is set to wait for a response.
505 - HTTP Version Not Supported	Server does not support the HTTP protocol used by the client for the request.
